Gary:

I'm at the site and there is the usual odor near and in the metal building next to the tank farm . But that odor dissipates within 40 feet from the metal building or about 50 feet from the fence. There is a slight odor within a few feet of the frac tanks but it dissipates within a few feet. There is no odor down by our boring location. The drill rig runs on diesel but we ran it and couldn't detect any odors.

I drove up and down grace lane and couldn't detect any odors. It is drizzly and slightly rainy so that may be affecting odors.

We are spending the rest of the day drilling at (b) (6) We are finished a (b) (6)

Brenda

> We are doing the second phase of sampling. The pumping was to remove water from the asphalt area on the school side so we could get a drill rig in. We haven't removed water from the tank containments since before the holidays. We removed about 12 inches then so we didn't have to deal with any weather and emergency removals during the last two weeks of the year.
